Finding new models of support

Ben's service currently houses 5 individuals who are supported by Just Roaming. One of these individuals is Ben, who was one of the first to move in.

Ben settled in to his new property with Just Roaming, whereby a call for assistance button and door alerts were provided. Within the first week, the system was able to identify that there was unexplained frequent movement overnight.

Ben was shown to display high levels of activity overnight

It transpired that the high level of activity that the system evidenced was Ben physically presenting anxiety. Pacing back and forth was the first sign of Ben's anxiety becoming heightened.

Just Roaming then set up a significant motion alert, which meant that when Ben's anxiety presented itself, staff could respond accordingly. Just Roaming helped show the reality of Ben's anxiety which meant that support staff could work with him to reduce these incidents. This entailed the provision of PRN medication upon a significant motion alert being triggered.

The number of alerts has seen a remarkable decrease since the installation of the system, with it now being a rare occurrence. Just Roaming enabled a data informed decision to reduce Ben's consumption of PRN medication.

Date	Alert	Amount
April - June 2021	Significant motion alert	211
April - June 2023	Significant motion alert	36
